Recon Report Use Cases and Value

The Risk reporting you and your clients need now

More revenue, better force protection, better strategy, less liability, operational streamlining, cost savings, focused security mitigation, added value to clients/differentiation.

OSINT TVAs (Venue, Residential, Retail)

- Definition- Open source threat vulnerability assessment (Risk assessment for security)
- Uses- Preplanning of security detail, risk assessment, documentation of risk assessment, security strategy and plan advisement, security team briefings, contributor to complete onsite TVA, contract sizing, contract bids, investment/location decision support, lodging options

INTSUM (topical or geographic)

- Def- Intelligence summary- Examination of risk/threats over geography or topic over defined time periods. Can be certain threat risk topics or particular areas, and includes specific SIGACTS, Bytes, and individual threat/risk data points with analysis and trends.
- Uses- Focused look at neighborhoods, cities, or particular risk/threat topics over a given time frame for planning security strategy or plans, monitoring risk levels, measuring changes in risk, evaluating areas threats, trend analysis, projections, investment/location decisions, area threat assessment, route planning, team briefing, client advisement, efficacy of security implementation, business development for security teams

Area/City Threat Assessment

- Def- A general risk assessment overview of a city, neighborhood, or target area based on multiple risk topics.
- Uses- These reports help with travel preparation, contract risk assessments (qualitative), area studies, transit threat assessments, client education, team briefing, area familiarization, political climate, travel patterns, crime levels, neighborhood threat assessment, tourism risk, event planning, logistical planning, threat actor analysis, surveillance planning, emergency or evasion/exfiltration planning

Human Risk Scan / Assessment

- Def-A A risk evaluation of a person of interest ranging from an initial Human Risk Scan to a comprehensive Human Risk Assessment (HRA). The scan provides high-level identification of potential risk indicators beyond a basic background or criminal check, while the HRA delivers deeper, analyst-led investigation and contextual assessment when elevated confidence is required.
- Uses- These reports are used to perform due diligence when hiring, when deciding to do business with someone, a possible threat actor, stalkers, clients, or subjects of an analysis.

Route Recon (Scan/Full Report)

- Def- A risk analysis of defined or potential routes from start point to end point, delivered as either a route scan or a full Route Recon Report. Analysis examines environmental, historical, behavioral, and operational factors that could impact movement from Point A to Point B.
- Uses- These reports are used primarily for planning routes for escorting assets, principals, for executive protection, evasion, emergency planning, operations, logistics, route decisions

Entity Risk Scan

- Def- A general risk assessment overview of a person of interest. This goes beyond a simple background check or limited criminal check. It looks at more sources and a more complete understanding of the possible risk a person poses (if any).
- Uses- These reports are used to perform due diligence when hiring, when deciding to do business with someone, a possible threat actor, stalkers, clients, or subjects of an analysis.

SITREP

- Def- Situation Report- Based on an ongoing risk event or situation, the SITREP tracks and monitors an ongoing issue with periodic reports that cover main risks and security aspects of these ongoing situations. SITREPs can cover a variety of topics that could impact operations and planning.
- Uses- These reports are used to monitor ongoing events that could pose a threat or risk to security operations in the area with analysis compiled into brief reports. Examples include major protests, high profile cases or releases, high risk potential events, political events, elections, ongoing threats, policy changes, disasters, weather, outbreaks etc.

Stay Informed, Stay Secure. Request capabilities brief anytime @alpharecon.com

Entity or Personal Vulnerability Profile

- Def- An analysis from the “red” side of main vulnerabilities facing a company, organization or person to facilitate a corresponding security and risk management strategy.
- Uses- These reports help with security and risk management/strategy preparation and planning. Attack surface mapping, vulnerability mitigation, client briefing, team briefing, risk intel monitoring focus, contract sizing, security budgeting, digital footprint, competitive analysis, IP risks, insurance risks, legal/policy risks, reputation, reviews of security services etc

Cyber/Dark Web vulnerability Profile

- Def- A detailed risk assessment of an organization or person’s specific digital footprint, exposure to dark web, and online data vulnerability.
- Uses- These reports help with security and risk management/strategy preparation and planning. Attack surface mapping, vulnerability mitigation, client briefing, team briefing, risk intel monitoring focus, digital presence remediation planning, digital footprint, IP risks, cyber vulnerability, reputation, target hardening, PAI assessment, client digital risk understanding.

INTSUM Lite (BidReady)

- Def- A rapid, guard-centric intelligence summary that analyzes the site and surrounding area to identify the most relevant threats, patterns, and near-term risk drivers—packaged in a bid-ready format.
- Uses- these reports help with bid/RFP and renewal support, guard-force sizing, and coverage planning by summarizing local crime/disorder/drug activity and policing trends, highlighting high-risk blocks/corridors and peak-risk time windows, providing a 30–90 day risk projection, an AI red-team summary, and recommended security enhancements.

Special Reports

- Def- Any intelligence reports not included above, including bespoke intelligence services and marketing products. These are accepted conditionally and have variable pricing depending on scope.
- Uses- These reports help with security and risk management/strategy preparation and planning across specialized topics and studies. This includes white paper production, marketing products, in depth analysis on topics, studies of specific threats or risks, and scientific analysis. Examples could be reports on violent extremist organization (VEO) reports, homelessness studies, physical security team presence analysis, competitive analysis, heat map studies for cities, before and after security comparisons. This also includes marketing pieces and content for social media and for client sales engineering processes.
